Summary

Our Innovative Reconciliation Report

- *It starts with a "SET" definition.*

- *SETs are virtual combinations of interconnected tanks, level sensors, IN and OUT flow meters which need to be seen as one operational unit.*

- *Once you define your SETs, simply click on Proceed button to reconcile your operations on a daily, monthly or any selected period of time.*

- *A Mobile Tanker can be considered as a SET, Your Tank Farm is surely a useful SET to define.*

Reports

Reconciliation

It doesn't matter if Mobile Tanker doesn't have an IN meter, our reporting engine counts it when you fill it by the yard meter.
