Fuel-EYE
Fuel-App

Q1- 2026

Comprehensive Online Fuel
Monitoring & Control Platform

It's the right time!

While Fuel Prices are hiking continually and businesses suffer from lowest margins on their projects, saving a liter has become more important than ever.

Don't get me wrong, saving is not related to fuel thefts, order bunch of so called "smart" devices to stop it; Nope! Even future's "smarter" and 'smartest" devices also cannot stop theft cases.

Saving comes with investing on the right platform with a comprehensive workflow which can address your automation needs and reduce your manual work, lower human intervention …

This is where you will save!

So again:

- Reform and automate your workflow
- Reduce your team size
- Eliminate human intervention
- Get real-time inventory updates
- Bill your consumers at no delay
- Rely on precise transactions information
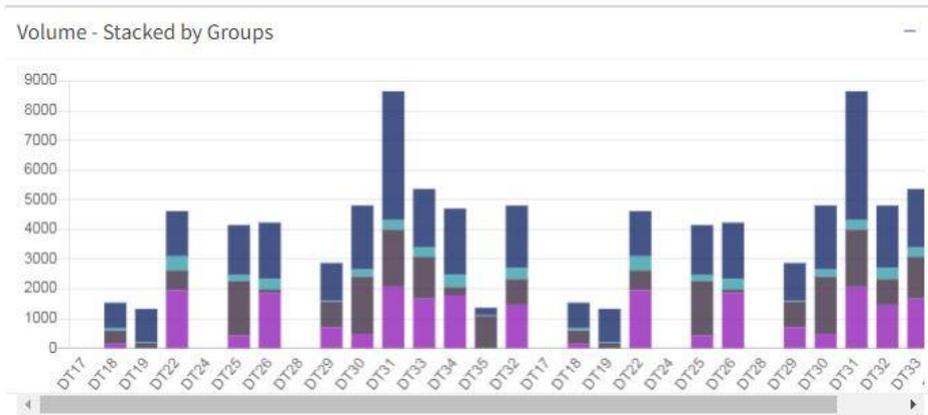

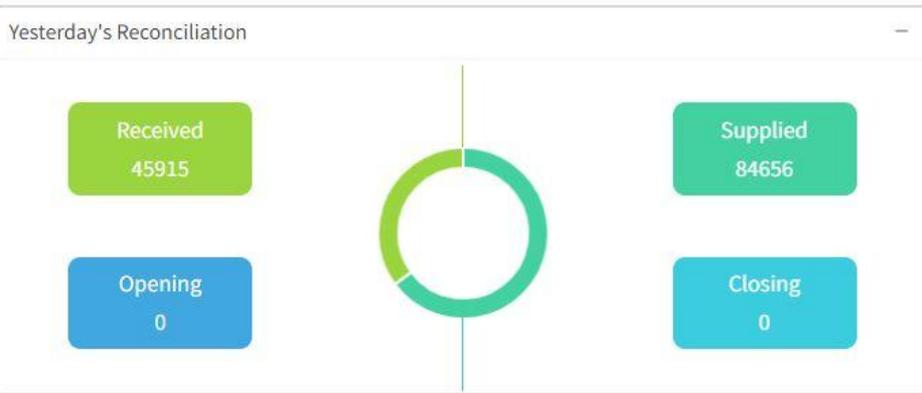

Rely on Fuel-EYE

No limits

- The most versatile cloud connected fuel supply control system for B2B & B2C operations

- Provides multiple levels of authentication from RFID based authorization to keycodes.

- Covers a wide range of flow meters, dispensers and industry standard measurement instruments

- Monitors the entire supply chain from terminals, depots, tankers, receive and supply meters, down to the inlet of your fleet

- Runs on embedded computers with no limitation of any type
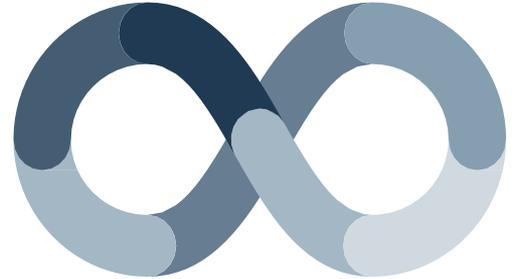

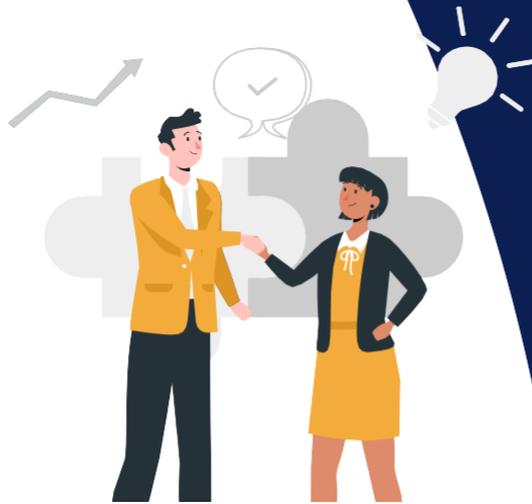

Dashboards

Your consumers/divisions will have access to their own fleet's cloud dashboard and fuel transactions

Reports

Transactions

Summary

Under Transactions and Summary, you will find below reports:

- Report by Flow Meter
- Fleet In-take Report
- Report by Projects
- Report by Personnel

Our Innovative Reconciliation Report

- *It starts with a "SET" definition.*

- *SETs are virtual combinations of interconnected tanks, level sensors, IN and OUT flow meters which need to be seen as one operational unit.*

- *Once you define your SETs, simply click on Proceed button to reconcile your operations on a daily, monthly or any selected period of time.*

- *A Mobile Tanker can be considered as a SET, Your Tank Farm is surely a useful SET to define.*

Reports

Reconciliation

It doesn't matter if Mobile Tanker doesn't have an IN meter, our reporting engine counts it when you fill it by the yard meter.

Control Mechanisms

Assets

Add, enable, disable & change mode of fueling of assets and fleet

Personnel

Add drivers and let them fuel their vehicles, totally unmanned stations

Groups

Make groups for your Assets and Personnel and monitor their consumptions

Projects

Define your new sites and projects and check their fuel consumption

Status

Meters

Check your tankers and systems locations and their last communication time

Sync

Our distributed databases gets synchronized at every 5 min and you can check the details of sync status of your assets and meters.

Admin

Accumulator
Administrator can correct the wrong odometer entries if it is not captured automatically

Anonymous
Any flow or leakage no matter how small, if goes through your flow meter, will be recorded here for investigation

Devices
To manage the meter names and details

Viewers
Viewers are the consumers, departments and end-users, define their access level here

Corrections
Manage, merge and make corrections on limited fields

Asset Tags
Detach tags from sold or off-hired assets & assign them to others

Audit

01 **Back Log**

Back Log shows all of your transaction activities even those tried to tamper the system

02 **Change Log**

Any change on the Assets and Transactions, whether by the system or by the users, is recorded with the user id and time.
